The ultimate in ticket security…

➪ # SCAN·TIX

ticket scanning software solution from Vtix.

Although Vtix ticket stock contains safety features to ensure authenticity and limit fraud, our **Scantix** software represents the ultimate in ticket security. This authentication process ensures that the ticket presented to you at the point of admission is valid protecting your event against fraudulent activity. It's simple to use and extremely effective.

With **Scantix** installed on a PC or laptop, you can scan any ticket containing a barcode to determine its validity. Once the ticket is scanned, **Scantix** compares the number associated with the barcode on the ticket to a list created in a .csv file format and imported into **Scantix**. If a match is confirmed, the barcode number is recorded including the date and time the ticket was scanned. If the barcode is a duplicate or does not correspond to a number in the list **Scantix** warns you through both on-screen visual and sound effects.

Tickets on the left hand column have been scanned and compared to the list on the right column.

Note:
Ticket number 5 has been scanned twice. The red flag indicates an invalid ticket.

Scantix Screen Shot

To take advantage of our **Scantix** software, you must have one of the following;

- Tickets printed by Vtix that contain a barcode. The list of barcode numbers can be generated by you or Vtix.
- Printed tickets with barcodes using our Printix software. The same basic numerical sequence generated by Printix must be re-created in a .csv file format and imported into **Scantix**.
- Printed tickets using our Printix Ultimate version. This enables you to customize the barcode list for additional security.
- Tickets printed with barcodes through another source but have access to the original .csv list to import into **Scantix**.

Throughout the event, **Scantix** provides an on-going, real-time summary of all Valid and Invalid tickets. And because **Scantix** is automatically updating the original .csv file at the same time, you can open the file in a program like MS Excel to generate any number of reports for a complete audit trail.

Cost: $250.00

Software only.
Not including applicable taxes.

Vtix is also a distributor of affordable hand-held scanners that can be used in conjuction with **Scantix** software. Motorola Scanners have an ergonomic shape to maximize user comfort and will stay secured in the user's hands. Even if you have never used a scanner before, they are so easy to use you will be scanning like a seasoned pro within minutes.

Motorola scanners are available in either USB or Bluetooth versions. The Bluetooth scanner gives you roaming capabilities of up to 30 feet.

Another major benefit of **Scantix** software is that you can scan tickets concurrently using multiple scanners (one Bluetooth and one or more USB units) connected to a single PC or laptop giving you the ability of a network version as long as you only have a single admission point.

If you have had a problem with ticket security in the past or are concerned about ticket reproduction for your events, why not put **Scantix** to work for you to eliminate fraud.
